

Docket No. AUS920000946US1

**CLAIMS:**

What is claimed is:

- 5 1. A keyboard apparatus comprising:  
a fabric;  
a plurality of switch units coupled to the fabric,  
wherein each switch unit within the plurality of switch  
units includes:  
10 a capsule containing an electrically responsive  
liquid, wherein the electrically responsive liquid causes  
the capsule to increase in rigidity in response to  
application of an electric field to the electrically  
responsive liquid;  
15 a switch coupled to the capsule, wherein a selected  
pressure applied to the capsule activates the switch; and  
a plurality of electrical conducting lines connected  
to the plurality of switch units.
- 20 2. The keyboard apparatus of claim 1, wherein the  
switch is a pizeoelectric-sensative component.
3. The keyboard apparatus of claim 1, wherein the  
electrically responsive liquid causes the capsule to  
25 expand when an electrical field is applied to the  
electrically responsive liquid.
- 30 4. The keyboard apparatus of claim 1, wherein the  
fabric is a form of an apron.
5. The keyboard apparatus of claim 1, wherein the

plurality of switches is coupled to the fabric by being embedded within the fabric.

6. The keyboard of claim 5, wherein the fabric includes  
5 a plurality of symbols in locations on the fabric identifying the plurality of switches.

7. The keyboard apparatus of claim 1, wherein a number  
of the plurality of switch units have a different  
10 rigidity from others in the plurality of switch units when an electric field is applied to the electrically responsive liquid.

8. The keyboard apparatus of claim 1, wherein the  
15 electrically responsive liquid is an electrorheological fluid.

9. A keyboard comprising:  
a fabric;  
20 a plurality of switch units couple to the fabric, wherein each switch unit includes:  
a sealed unit containing an electrically responsive liquid;  
a switch, wherein the electrically responsive  
25 liquid in each switch unit increases in viscosity in response application of an electric field to the electrically responsive liquid; and  
a plurality of electrical conducting lines connected to the plurality of switch units and an output  
30 configured for connection to a data processing system.

Docket No. AUS920000946US1

10. The keyboard of claim 9, wherein the output is a wireless transmitter.

11. The keyboard of claim 9, wherein the output is a universal serial bus connector.

12. A data processing system comprising:  
a bus system;  
a memory connected to the bus system, wherein a set  
10 of instructions are located in the memory;  
a processor unit connected to the bus system,  
wherein the processor unit executes instructions; and  
a keyboard connected to the bus system, wherein the  
keyboard is embedded in a fabric and includes:  
15 a plurality of switch units attached to the  
fabric, wherein each switch unit within the plurality of  
switch units includes:  
a capsule containing an electrically responsive  
liquid, wherein the electrically responsive liquid causes  
20 the capsule to increase in rigidity in response to  
application of an electric field to the electrically  
responsive liquid;  
a switch coupled to the capsule, wherein a  
selected pressure applied to the capsule activates the  
25 switch; and  
a plurality of electrical conducting lines  
connected to the plurality of switch units.

13. A pointing apparatus comprising:  
a fabric;  
a switch unit coupled to the fabric, wherein the

SUBA 37

Docket No. AUS920000946US1

switch unit:

SUBA37<sup>5</sup>  
a capsule containing an electrically responsive liquid, wherein the electrically responsive liquid causes the capsule to increase in rigidity in response to application of an electric field to the electrically responsive liquid;

a plurality of switches coupled to the capsule, wherein a selected pressure applied to a portion of the capsule activates one or more of the plurality of switches.

14. The pointing apparatus of claim 13, wherein activation of one or more of the plurality of switches generates signals to control a pointer on a display of a data processing system.

15. The pointing apparatus of claim 13, wherein the capsule is in shape of a rectangle.
